Lightsoft Bollard luminaire

Anglicare's Minto Gardens development consists of 10 Independent Living Unit buildings, a community pavilion and 100-bed Residential Aged Care Facility (RACF). The Minto site presented design challenges, including the need to design dwellings that were modern, high quality and affordable, and that maximised the natural biodiversity of the sites.

Sizeable areas of the site were given over to tree retention in order to maximise natural biodiversity, with appropriately sized blocks nestled into the landscape. This environmentally sympathetic siting of the development adds to the quality of living and creates a harmonious visual relationship between amenity and density.

MINTO GARDENS

A series of internal and external communal areas deliver social value and opportunities for residents to connect with each other and the broader community. A café, playground, dog park and a slew of other outdoor amenities all combine to create a village atmosphere that welcomes all.

Ligman's Lightsoft Bollards emit gentle indirect lighting for the courtyard pathways, and help create the comforting ambience Anglicare is seeking in this application.
